

# ADA Compliant Handrail Scale with ID-Display™

**seca**  
Precision for health

## seca Scale-up Line

- + **High Weight Capacity:** 800 lbs / 360 kg to accommodate a wide range of patients
- + **ADA-Compliant Slip-Resistant Surface:** Enhances safety for patients providing a secure, stable footing
- + **ADA-Compliant Standing Supports:** Dual standing supports on both sides
- + **ADA-Compliant Standing Support Length:** Gripping surfaces exceed 4" in length
- + **ADA-Compliant Standing Support Height:** Antimicrobial handrail angled design offers variable grip height and greater accessibility
- + **Direct EMR-validated Integration:** Enhances dosing accuracy and reduces documentation errors with real-time weight transmission
- + **Optional:** Height measurement rod

seca Scale-up Line

# ADA Compliant Handrail Scale with ID-Display™

## Robust, ergonomic handrail for patient stability

The elegantly-curved handrail is integrated with the cast-iron base and is part of the weight measurement, while providing added safety for patients who need it. This allows patients with restricted mobility to step onto the scale easier, the risk of falling is considerably reduced, and improves user workflow. The handrail is ergonomically designed to offer the ideal grip for patients, no matter which height.

## Spacious and hygienic platform

The platform of the seca Scale-up Line consists of absolutely break-proof seca Bearclaw Glass®. The glass not only looks good, it also ages significantly slower than e.g. plastic and is particularly hygienic. It can be easily and quickly cleaned and has germ-reduction rates similar to stainless steel, with an anti-slip coating for safe standing. Transport is very easy due to the smooth-running, robust rubber wheels.

## ID-Display™ ensures easy and user-friendly data transmission to EMR systems

seca Scale-up Line is developed especially for perfect integration of measured data into the EMR. Weight and data such as time of measurement are stored centrally and accessible for every user. The ID-Display™ shows name or patient ID with every measurement, which are gathered by an additional barcode scanner. This makes the integration process transparent, safe and even more user-friendly.
